Commercial Manufacturer's Index

Armstrong provides intelligent system solutions that improve utility performance, lower energy consumption, and reduce environmental emissions while providing an enjoyable experience. Product lines involve equipment such as steam traps, condensate recovery vessels, humidification, hot water heating, and mixing valves.

The leading commercial double-wall special gas vent system made from super-ferritic stainless steel. With increased airspace between the inner flue conduit and the outer jacket, Heat Fab reduces the required clearance to combustibles and makes a more rigid flue pipe with larger diameters becoming easier to handle.

A manufacturer of steam and hot water boiler systems, Lattner can provide systems ranging from vertical tubeless to large Scotch Marine types.

Lochinvar is a major manufacturer and innovator of commercial boilers and water heaters. With a complete line of heaters from residential to large commercial, Lochinvar has the ability to meet the needs of virtually anyone on the commercial/industrial, specialty water heating, and hydronic markets. Lochinvar takes pride in its "engineered products concepts" and encourages a close working relationship with consulting engineers, architects, and project designers in the interest of developing water heating and hydronic systems perfectly suited to specific project requirements.

QuantumFlo was founded to promote and expand new packaged system technologies to the pump systems market. As engineers shift from old, inefficient constant speed technologies toward VFD, modbus, adaptive and associated controls, no single company has completely committed themselves to advancing these technologies.

Spence Engineering Company is devoted to providing steam specialty and fluid control devices. Spence offers a wide range of products covering pressure/temperature regulators, control valves and condensate pumps.

Thrush Company's longevity, leadership, and reputation for superior quality testify to the commitment to the hydronics industry. We manufacture a full line of pumps, heat exchangers, valves, fittings, and accessories for residential, commercial, and industrial systems. Superior product quality has earned Thrush its leadership position along with personal responsive service, prompt delivery, expert technical support, and a high standard of business ethics.
